

Општа астрономија 2, школска 2025/2026

Уз задатак испод је приложено и решење.

Додатни задатак

1. Израчунати дужину обданице у Београду ($\varphi = 44^{\circ}48'13''.2$, $\lambda = 1^h22^m3^s.2$) 6. јуна 1961. водећи рачуна о рефракцији и Сунчевом полупречнику.

$0^h UT$	η	$\delta_{\odot}$
6.6.	$1^m34^s.4$	$22^{\circ}36'.2$
7.6.	$1^m23^s.6$	$22^{\circ}42'.4$

I Obiektujemy problemo $\delta\theta^i, \delta\theta^z$

$$\varphi = 44^\circ 48' 13''.2$$

$$\lambda = 1^h 22^m 35.2$$

$$\cos t\theta^i = -\operatorname{tg}\varphi \operatorname{tg}\delta\theta^{6.6} \rightarrow t\theta^i = 16^h 22^m 48^s.26$$

$$\cos t\theta^z = -\operatorname{tg}\varphi \operatorname{tg}\delta\theta^{7.6} \rightarrow t\theta^z = 7^h 38^m 13^s.52$$

$$\text{zasad: } \eta^i = \eta_{6.6}.$$

$$\eta^z = \eta_{7.6}.$$

$$t_p = t_\theta + 12^h$$

$$\eta = t_p - t_s$$

$$t_s = UT + \lambda$$

$$\Rightarrow UT = t_\theta + 12^h - \eta - \lambda$$

$$UT_i = t\theta^i + 12^h - \eta_i - \lambda$$

$$UT_z = t\theta^z + 12^h - \eta_z - \lambda$$

$$\Rightarrow \begin{cases} UT_i = 3^h 0^m 8^s.77 \\ UT_z = 18^h 16^m 4^s.75 \end{cases}$$

$$\delta\theta^i = \delta\theta_{6.6} + \Delta\delta\theta \frac{UT_i}{24^h} \rightarrow \delta\theta^i = 22^\circ 36' 58''.53$$

$$\delta\theta^z = \delta\theta_{7.6} + \Delta\delta\theta \frac{UT_z}{24^h} \rightarrow \delta\theta^z = 22^\circ 47' 7''.18$$

II Używamy $Z\theta = 90^\circ + \beta + R_\theta = 90^\circ 50'$

$$\cos(90^\circ 50') = \sin\varphi \sin\delta\theta^i + \cos\varphi \cos\delta\theta^i \cos t\theta^i$$

$$\downarrow \cos t\theta^i = \frac{\cos(90^\circ 50') - \sin\varphi \sin\delta\theta^i}{\cos\varphi \cos\delta\theta^i} \rightarrow t\theta^i = 16^h 16^m 36^s.98$$

$$\downarrow \cos t\theta^z = \frac{\cos(90^\circ 50') - \sin\varphi \sin\delta\theta^z}{\cos\varphi \cos\delta\theta^z} \rightarrow t\theta^z = 7^h 44^m 16^s.09$$

$$\eta_i = \eta_{6.6} + \Delta\eta \frac{UT_i}{24^h}$$

$$\eta_z = \eta_{7.6} + \Delta\eta \frac{UT_z}{24^h}$$

$$\eta_i = 1^m 33^s.05$$

$$\eta_z = 1^m 15^s.38$$

$$\left. \begin{aligned} UT_i &= t\theta^i + 12^h - \eta_i - \lambda = 2^h 40^m 7^s.6 \\ UT_z &= t\theta^z + 12^h - \eta_z - \lambda = 18^h 36^m 8^s.8 \end{aligned} \right\} \Rightarrow UT = 15^h 27^m 40^s.47$$
